

Skis for gyroplanes & light aircrafts

We have developed and carefully constructed simple and reliable skis for gyroplanes and light aircrafts.

The skis are made using the latest technique in fiberglass. They have a clean aerodynamic design, are easy to attach and detach from your aircraft. Skis are tested on different snow and flight conditions.

Features:

- Light and strong material – fibre glass and certified for aviation epoxy resin;
- Fitting set included (according to your specifications);
- Weight: front ski - 4,5kg, back ski -3,6kg, total weight of set 12,5 kg;
- Length – 1200 mm, width – 350mm;
- Shock-absorbers working up and down;
- Fast and easy fitting;
- Can be fitted and used together with wheels / without wheels;
- Front ski has additional insert, using ski without wheel on thick and light snow;
- Every sky has small wheels on the bottom part, which allows using them on the snow or grass runway and taxi on the concrete.
